# Muhammad Tayyab

#### Software Engineer

Mobile: +92-336-7818585, Email: <u>iamtayyab336@gmail.com</u>

GitHub: github.com/iamtayyab007

#### **SUMMARY**

Software Engineering graduate with strong skills in React and building user-friendly web applications. Has completed several self-led projects, showing good knowledge of front-end development and problem-solving

#### **EDUCATION**

BSc. Software Engineer

3.37/4.0

University of Engineering & Technology, Bannu

#### **EXPERIENCE**

MERN Stack Developer (React + Next.js + TypeScript)

**Current Experience | 2024 - Present** 

- □ Developing full-stack applications using MERN stack (MongoDB, Express.js, React, Next.js, Node.js).
- □ Building high-performance, scalable, and secure web applications with modern technologies.
- □ Writing clean, maintainable, and type-safe code using TypeScript.
- □ Integrating authentication using JWT, NextAuth.
- ☐ Implementing state management with **Redux Toolkit and Context API**.
- □ Working with server-side rendering (SSR) and static site generation (SSG) in Next.js.
- □ Ensuring **SEO optimization, performance improvements, and accessibility** best practices.

Web Developer (WordPress – SEO – Online Monetization) Self Employed Previous Experience

- □ Conducted keyword research to improve website rankings and gain organic traffic.
- □ Performed on-page SEO optimization and content improvements.
- ☐ Identified content gaps and developed strategies to create engaging and relevant content.
- □ Built and monetized blogs, driving consistent high-traffic growth.

| monetization platforms like Adsense, PubGalaxy and Ezoic.  |
|--|
| Projects   |
| 1. True Feedback   |
| A secure and AI-powered anonymous feedback platform built with Next.js and TypeScript, allowing users to receive confidential feedback while ensuring authentication and validation. |
| Developed using Next.js 14 (App Router) with TypeScript for scalability and maintainability.   |
| ☐ Integrated NextAuth.js with custom credentials for secure authentication.  |
| ☐ Used <b>Zod</b> for robust input validation, ensuring data integrity.  |
| ☐ Implemented <b>Resend email service</b> for OTP verification to authenticate users securely.   |
| ☐ Utilized MongoDB Aggregation Pipeline for efficient data processing and analytics.   |
| Designed an intuitive and accessible UI with <b>ShadCN</b> components for a modern user experience.  |
| ☐ Integrated <b>React Hook Form</b> with debouncing to optimize user input handling.   |
| Added an <b>AI-powered message suggestion feature</b> , enhancing user engagement with intelligent feedback recommendations.   |
| ☐ Ensured seamless performance with server-side rendering (SSR) and API route optimizations in Next.js.  |

□ Did website speed optimization techniques to enhance user experience and SEO

☐ Managed end-to-end SEO strategies to increase visibility and revenue from

#### 2. Full-Stack Authentication in NextJs

performance.

A secure and modern authentication system built with **Next.js** and **TypeScript**, featuring user registration, login, and email verification.

|                          | Developed using Next.js 15 for server-side rendering (SSR) and API route  |
|--------------------------|---|
|                          | handling.   |
|                          | Utilized bcryptjs for password hashing, ensuring secure storage of user   |
|                          | credentials.  |
|                          | Implemented jsonwebtoken (JWT) for secure authentication and session  |
|                          | management.   |
|                          | Integrated <b>Mongoose</b> with <b>MongoDB</b> for efficient user data storage and retrieval.   |
|                          | Used <b>Nodemailer</b> to send verification emails and password reset links.  |
|                          | Employed <b>Axios</b> for seamless API requests and error handling on the frontend.   |
|                          | Designed a user-friendly interface with smooth authentication flows.  |
|                          | Implemented role-based access control (RBAC) to manage different user   |
|                          | permissions.  |
|                          | olution for managing personal finances, enabling users to track income and categorize spending, and analyze data visually.                    |
| Deve                     | loped with the React', leveraging Context API for state management.   |
| <ul><li>Design</li></ul> | gned a clean and intuitive UI for tracking personal expenses and income.  |
| □ Imple<br>device        | emented a responsive layout using Tailwind CSS, ensuring smooth use on various es.  |
| <ul><li>Integ</li></ul>  | rated real-time data updates and interactive pie charts for data visualization.   |
| □ Enab                   | led efficient data handling and storage with local storage.   |
| □ Creat                  | ed user-friendly modals for adding and editing expense/income entries.  |
| □ Ensu                   | red a seamless user experience by implementing features for expense categorization  |
| and to                   | otal balance calculation.   |
| 4. Gemin                 | i Clone   |
|                          | ased project that aims to replicate the functionality of Google Gemini's AI uses the Google Gemini API to enhance conversational interaction. |

□ Developed using React, leveraging the Gemini API for real-time cryptocurrency data

integration.

| □ Desi  | gned and implemented a responsive and modern user interface using Tailwind                    |  |
|---|---|--|
| CSS   | •   |  |
| □ Man   | aged global state and seamless data sharing across components using Context                   |  |
| API   |   |  |
|   | orporated dynamic data visualization for user-friendly market analysis and trends.            |  |
|   |   |  |
| 5. MERN S   | Stack Notes App   |  |
|   | ch digital notes application designed to help users efficiently create, d manage their notes. |  |
| □ Buil  | t using the MERN stack, with React for the frontend, Node.js and Express.js for               |  |
| the b   | backend, and MongoDB for secure data storage.   |  |
| <ul><li>Desi</li></ul>                                    | gned an intuitive interface allowing users to create, update, delete, and search              |  |
| note  | s with ease.  |  |
| □ Style   | ed the application for responsiveness and modern aesthetics using Tailwind CSS.               |  |
| □ Integ   | grated rich text editing and categorization features for enhanced note organization.          |  |
| 6. MERN S   | Stack Blog App  |  |
| A dynamic a posts.  | nd user-friendly blogging platform for creating, editing and deleting blog                    |  |
| □ Dev   | eloped using the MERN stack, featuring React for the frontend, Node.js and                    |  |
| Exp   | ress.js for the backend, and MongoDB for robust data storage.                                 |  |
| <ul><li>Desi</li></ul>                                    | gned and implemented features for creating, editing, and deleting blog posts.                 |  |
| □ Style   | ed the application with Tailwind CSS to ensure a responsive and modern design.                |  |
|   | rporated a rich text editor for content formatting and commenting functionality to            |  |
| enha  | ance user engagement.   |  |
| 7. Login and Registration Form with Authentication System |   |  |

## 7. L

A user authentication system allowing users to securely register, log in, and access protected content.

|        | Developed using the MERN stack, with React for the frontend, Express.js for the backend, and MongoDB for data storage.                     |
|--------|--|
|        | Created registration and login forms that collect user details (username, email, password) and validate inputs.                            |
|        | Implemented user authentication with JWT (JSON Web Tokens) for secure session management and tokenbased authentication.                    |
|        | Utilized bcrypt for password hashing to ensure secure storage of user credentials in MongoDB.  |
|        | Set up validation and error handling for both frontend and backend to ensure the integrity and security of the authentication process.     |
|        | Used React Router for navigation and redirection, ensuring users are redirected to appropriate pages based on their authentication status. |
|        | Enabled user login via local email/password, and implemented user session handling using JWTs stored in cookies for state persistence.     |
| 8. Sho | pping Cart App   |
|        | ranced e-commerce platform enabling users to browse, select, and managests with a seamless shopping experience.                            |
|        | Developed using React, integrating React and Redux Toolkit for state management.   |
|        | Fetched product data dynamically from an external API.   |
|        | Implemented a robust shopping cart system with features to add, remove, and update the product.  |
|        | Utilized Redux Toolkit for efficient global state management, ensuring scalability and performance.  |
|        | Styled for responsiveness and a modern user interface using Tailwind CSS.  |

## 9. Food Recipe App

| An intuitive application for discovering and exploring a variety of food recipe catering to users' culinary interests.            |   |  |  |
|---|---|--|--|
|   | ☐ Built using React and Context API for efficient state management across components.   |  |  |
|   | ☐ Integrated a third-party API to fetch and display a wide range of recipes dynamically.                                      |  |  |
|   | ☐ Implemented search and filter functionalities to help users find recipes by ingredients,                                    |  |  |
|   | cuisine, or dietary preferences.  |  |  |
|   | □ Designed a clean and responsive user interface using Tailwind CSS for modern  |  |  |
|   | aesthetics.   |  |  |
|   | □ Enhanced user experience with loading states, error handling, and a recipe detail view                                      |  |  |
|   | showcasing ingredients and step-by-step instructions.   |  |  |
| 10.   | AI Image Generator  |  |  |
|   | I-powered image generator that creates custom images based on user-provided prompts using OpenAI's API.                       |  |  |
|   | Developed using React for the frontend, providing an intuitive interface for users to enter text prompts and generate images. |  |  |
|   | ☐ Integrated OpenAI's API to process text inputs and generate images based on user descriptions.                              |  |  |
|   | Set up state management with React hooks (useState, useEffect) to handle user inputs and display generated images.            |  |  |
|   | ☐ Implemented loading and error handling mechanisms to ensure a seamless user experience.                                     |  |  |
|   | ☐ Used fetch for making API requests to OpenAI's image generation service.  |  |  |
|   | ☐ Created a user-friendly interface that allows users to download and share the generated images.                             |  |  |
| 11.   | Currency Converter with Custom Hook   |  |  |
| A user-friendly currency converter application designed to convert between differen currencies in realtime using an external API. |   |  |  |
|   |   |  |  |

□ Created a custom React hook to handle fetching exchange rates and converting

between selected currencies.

|   |   | Integrated with an external currency conversion API to provide real-time exchange rates. |  |  |
|---|---|--|--|--|
|   |   | Designed a clean and intuitive UI for users to select currencies and input amounts.      |  |  |
|   |   | •  |  |  |
|   |   | Implemented state management using React's useState and useEffect for handling and       |  |  |
|   |   | updating conversion data.  |  |  |
| 12.   | P   | assword Generator  |  |  |
|   | A simple yet powerful password generator tool that helps users create strong, secure passwords with customizable options. |  |  |  |
|   |   | Built using React to provide an interactive user interface.                              |  |  |
|   |   | Allows users to customize the length and complexity of the generated password (e.g.,     |  |  |
|   |   | including uppercase letters, numbers, and special characters).                           |  |  |
|   |   | Implemented state management using React's useState and useEffect to dynamically         |  |  |
|   |   | update the password as users adjust settings.  |  |  |
|   |   | Ensured the password meets security best practices by generating random and              |  |  |
|   |   | unpredictable combinations.  |  |  |
|   |   | Styled the application for a user-friendly experience with Tailwind CSS.                 |  |  |
| 11.   | Tic   | -Tac-Toe Game  |  |  |
| A classic and interactive two-player Tic-Tac-Toe game, offering both challenge and fun for players. |   |  |  |  |
|   |   | Developed using React for the frontend to handle the dynamic nature of the game          |  |  |
|   |   | board and user interactions.   |  |  |
|   |   | Implemented game logic to determine win conditions, draw scenarios, and alternating      |  |  |
|   |   | turns between players.   |  |  |
|   |   | Managed state using React's useState and useEffect hooks for real-time game updates.     |  |  |
|   |   | Designed a simple, user-friendly interface with minimalistic styling to focus on the     |  |  |
|   |   | gameplay experience.   |  |  |
|   |   | Added a reset functionality to restart the game after each round, ensuring a seamless    |  |  |
|   |   | user experience.   |  |  |
|   |   |  |  |  |

### 13. Quiz App

An interactive quiz application allowing users to answer questions, track progress, and receive results at the end.

| Built using React for the frontend, ensuring a smooth user interface and real-time    |
|---|
| updates.  |
| Integrated a timer that counts down for each question, adding an element of challenge |
| Developed features to display multiple-choice questions and allow users to select     |
| answers.  |
| Managed user answers and scoring system, providing immediate feedback after each      |
| answer.   |
| Designed an engaging UI with responsive design using Tailwind CSS to ensure           |
| compatibility across devices.   |
| Implemented state management with React hooks (useState, useEffect) to handle         |
| current question and progress.  |

## 14. Background Color Changer

A dynamic web application that allows users to easily change the background-color of the page with a simple click.

Built using React for a responsive and interactive frontend.
Enables users to switch between different background colors with just a button click.
Uses useState hook for managing state to change the background color.
Styled with Tailwind CSS for a modern look and smooth transitions.
